

Combi Drive Tray Bolt & Nut

November 2009

No. 10

The new Combi Drive Tray Bolt & Nut that Jack Pennington Ltd now stock is an immense time saving product and will virtually replace the need for the traditional Roofing Nut & Bolt that contractors have used when installing cable tray. The benefits are huge with time saving being the biggest benefit as it can be driven in by a power tool instead of by hand tool (screwdriver), although just in case you only have the screwdriver you can still use it!

This product can be used in many applications but it has been specifically designed for bolting cable tray together saving the contractor time and also easing installation compared with the standard Roofing Nut & Bolt.

In addition to coming with two drives, slotted and pozi No.2 a main feature is the nut which is a serrated hex flange nut. This nut is far superior when compared to the traditional square nut which is usually handheld. The serration grips onto the tray and the hex nut allows a ring spanner to be used with the flange stopping the nut dropping through the spanner. This will save time and effort especially when working at height for the contractor compared to the square nut associated with a Roofing Nut & Bolt. Although this product is aimed at being a time saver it is also a hassle saving product that will do a far better, far quicker job for the installer.

Key Product Features:

- Mushroom Head
- 2 drives – Pozi No.2 & Slotted
- Serrated hex flange nut
- ROHS/WEEE compliant
- Four sizes :
 - M6 x 12mm
 - M6 x 16mm
 - M6 X 20mm
 - M6 x 25mm
