

ITW FireFix Clips

The FireFix range of clips from ITW is an innovative product that Jack Pennington Ltd has included in its range of products. This demonstrates the close working relationship that Jack Pennington Ltd has with its wide range of suppliers in developing products that are both time saving and cost effective to the contractor.

When coupled with the Spit Pulsa 700E and range of nails, that Jack Pennington Ltd already stock extensively, it can offer significant savings for contractors over traditional screw fixing techniques. The reduction in installation time not only means cost savings of up to 50% but also enables the cable clips to be pre-installed ready for an electrician to add the cable later.

The FireFix clip not only saves time and money on site but also gives peace of mind by using a recognised brand.

Key Product Features:

- This system fixes each clip in just 10 seconds.
- Reduction in installation for greater on-site productivity.
- Can be pre-installed ready for the cable.
- Compliant with BS58839-1:2002 cable fixing requirements.
